Bourns® Network Interface Device (NID) Product Line Transfer

In accordance with ongoing product life cycle management procedures, Bourns has entered into an agreement to transfer its NID product line to Telecommunication Devices Inc. (TDI) effective January 1, 2019.

Scope of Agreement

TDI will assume marketing and sales of NID devices. As a part of the agreement, TDI will use Bourns® Station Protector and Splitter devices in their NID offerings. Bourns will continue to make these devices available to TDI on an agreed contract price basis.

Transition between Bourns and TDI

Customers may continue to order NID products from Bourns until December 19, 2018 and the ordered products will be shipped as Bourns® products. From December 19, 2018 onwards, Bourns will freeze all affected part series/numbers in its SAP system and will not accept any further orders for NID products. Any order received by Bourns after December 19, 2018 will be referred to TDI.

Ordering Part Numbers

TDI customers can continue to order NID series/part numbers by the existing Bourns series and part numbers. TDI does not plan to change these numbers. The products themselves will ship with TDI's logo and labeling after January 2, 2019.

A list of the affected product series is shown on the following page.

If you have any questions or need additional information, please feel free to contact [Bourns Customer Service/Inside Sales](#).
