

2025 PFAS DECLARATION

Bourns group of companies prioritizes environmental compliance and transparency. We are pleased to provide this declaration regarding the presence of certain Per-and Polyfluoroalkyl Substances (PFAS) in the standard electronic components we list on our website together with completed Material Declaration Sheets (MDS).

A few completed MDS statements for Bourns® electronic components show “proprietary” for some of the homogeneous materials in accordance with industry practice. In cases where a sub-supplier provided to Bourns only a general description for a homogeneous material without the CAS number or a sub-supplier refused to issue a certification regarding PFAS for such “proprietary” homogeneous material, Bourns is unable to confirm if such “proprietary” homogeneous material is PFAS free. Thus, unless our MDS statement for Bourns® electronic component specially states that such Bourns electronic component does not contain any intentionally added PFAS despite presence of the “proprietary” homogeneous materials therein, this declaration does not address homogeneous materials shown as “proprietary” in the MDS statements for Bourns® electronic components.

Except as stated above, based on our review of the MDS statements, information from our suppliers and third-party sources, we confirm that Bourns® electronic components listed in Appendix A to this Declaration contain intentionally added PFAS, as defined by the Environmental Protection Agency (EPA) [EPA PFAS Under TSCA Section 8(a)(7)v2] and listed in the Organization for Economic Co-operation and Development (OECD) list released on October 3, 2017.

Except as stated above for homogenous materials identified as “proprietary,” other standard Bourns® electronic components listed on our website with the MDS statements are not known to contain intentionally added PFAS, based on the information we have received through the date of this declaration, August 31, 2025.

For any custom model series or components listed on our website without the MDS statement or with the MDS statement that includes a “proprietary” homogeneous material without confirmation of being free of intentionally added PFAS, additional clearance and verification would be required to confirm intentionally added PFAS content.

As part of our due diligence, we continuously monitor and review information from our suppliers and relevant third-party sources. We continue to work with our suppliers to reduce number of the MDS statements with homogeneous materials identified as “proprietary.” Should we receive new information indicating the presence of any intentionally added PFAS in any additional standard Bourns® electronic components

(not already listed in Appendix A hereto) we will update our records and republish this declaration.
