Bourns OSP Products Group Adds BLK Series Protector Panels

Riverside, California - January 24, 2013 - Bourns OSP Products Group is pleased to announce the release of the [Model BLK Series Protector Panels](#) for 5-Pin Surge Protectors. These protector panels are designed to provide protection for circuits being provided on twisted pair. The panels provide protection and connection for cabinets, CEV, huts, and pedestal applications. The modular protector panels are Cat 5 compatible and can be easily sized to a variety of port counts for broadband applications. A large variety of module capacities are available by combining various standard 10, 20, 25, 50 and 100 pair modules.

The Bourns® BLK Series uses standard 5-pin modules to provide overvoltage protection from harmful transient voltage surges such as lightning and power cross transients. 5-pin modules with sneak current protection are also available.

Should you have any questions or need additional information, please feel free to contact [Customer Service/Inside Sales](#).
