Bourns® Model 82 Series “Vintage” Guitar Potentiometer

Riverside, California - June 9, 2010 - In continuing support of the Professional Audio Market and by popular request, Bourns® Sensors and Controls Product Line is pleased to announce an update to our [Model 82 Series “Vintage” Guitar Potentiometer](#).

This specialty product is now available with a standard bushing length and plain shaft for knobs with set screws. In addition, this product is now also available with a long bushing/knurled shaft specifically suited for use in thick solid body electric guitars. Both new configurations are available in 250k and 500k audio taper resistance values.

Model 82 Series “Vintage” Guitar Potentiometer, best recognized for its “Bourns blue” color, was originally designed and produced in the late 1970s. This product is a culmination of popular features most widely requested by master luthiers and guitar designers.

Samples and production quantities are now available. For your convenience, the updated data sheet is now available on the pro audio website at www.bourns.com/proaudio.
