Bourns® GDT Products Group Former ENP F Series Part Number Changes

Riverside, California - January 15, 2009 - Bourns recently acquired certain products from Emerson Network Power (ENP). Among them were the **F Series station protection assemblies** with screw-in surge protectors. All of these protection assemblies now include the 2022-60-A Gas Discharge Tube (GDT) protectors which are the equivalent of the former ENP JZ gas models. Bourns has consolidated part numbers to reflect this change. These are part number changes only; the form, fit and function of the parts is the same.

Protection Assembly

2022-60-A GDT

Arrester Assembly with Fuse Chassis

374SVSR2.....	F00096.....	Replaced by F000878
