RESETTABLE FUSES

Bourns® Multifuse® Product Line Announces Extension of New MF-PSMF Family of Resettable Fuses and Part Number Change

Riverside, California - November 5, 2007 - Bourns is adding the MF-PSMF035X to the [MF-PSMF](#) series of Multifuse® Polymer PTC Resettable Fuses. This 0805 (2012 Metric) size surface mount device is 350 mA rated and is ideal for USB port and memory protection.

This new Multifuse® MF-PSMF Series uses the Bourns free expansion design, which allows the part to have greater resistance stability over time. For that reason, the existing MF-PSMF models will change part numbering. The numbering is as follows:

Old Part Numbers	New Part Numbers
N/A	MF-PSMF035X-2
MF-PSMF050-2	MF-PSMF050X-2
MF-PSMF075-2	MF-PSMF075X-2
MF-PSMF110-2	MF-PSMF110X-2

For further details on these exciting new models, please contact your nearest Bourns representative.

Features

- Compact design to save board space - 0805 footprint
- Small size results in very fast time to react to fault events
- Low profile
- RoHS compliant*
- Agency recognition: 

Applications

- USB port protection - On the Go and 2.0
- PC motherboards - Plus and Play protection
- Mobile phones - Battery and port protection
- PDAs / digital cameras
- Game console port protection
