Non-RoHS Samples for Sensors & Controls

Riverside, California - November 24, 2008 - As RoHS versions of models continue ramping up in production and demand for non-RoHS continues to decline, we are performing our annual review of non-RoHS products for possible obsolescence.

Effective immediately, we will cease taking orders for non-RoHS samples. Please advise customers, sales reps and distributors that the RoHS versions are readily available for sample requests.

Just a reminder that we imposed a moratorium on new non-RoHS part numbers eighteen months ago, with the exception of military/aerospace custom parts which have special requirements and where customers pay market prices for non-RoHS versions.
