Bourns® Model PDB182-GTRB Series "Blend-Balance" Guitar Potentiometer

Riverside, California - January 12, 2010 - Bourns® Resistive Products Division announces the release of our new [Model PDB182-GTRB Series "Blend-Balance" Guitar Potentiometer](#) in support of the Professional Audio Market.

This custom guitar potentiometer, best known as a "blend-balance pot," is designed for use as a balance control between two guitar pick-ups, where the volume level of each pick-up can be blended by utilizing a single dual-gang control. The unique M and N audio tapers provide volume blending capability to the guitarist. This product is designed with the features most widely requested by master luthiers.

Samples and production quantities are now available. The data sheet is available on the proaudio website at www.bourns.com/proaudio.
