

BOURNS®

Features

- Low output ripple
- 10 amp output current
- 92 % efficiency
- Low 0.5" profile
- Remote sense
- Adjustable Vout
- Short-circuit protection with auto-restart
- Fast transient response
- High-temperature operation
- Remote enable
- Output precharge capability

SLN10A-3SA Series – Power Module

General Information

The SLN10A is a non-isolated SIP using a 3.3 V input to provide 10 Amps of output current at voltages ranging from 0.8 V to 2.5 V. The SLN10A output is adjustable by the user to provide any voltage within its range. Its extra low 0.8 V output will power even the latest in ASICs, microprocessors, and DSPs.

The SLN10A has an industry standard pin-out, is 2 inches long, and only 0.5 inches high. Its total footprint is a space saving 0.75 in². Features include Enable/Disable, output voltage trim, remote sense, short circuit protection with auto-restart, fast transient response, and high temperature operation. The SLN10A is one of the most cost-effective DC-DC converters available.

Product Schematic

- NOTES:
1. Use low ESR capacitors for V_{in} and V_{out} bypassing.
 2. Part is enabled when ENABLE (10) is left floating or grounded.
 3. Apply 2.4 Vdc to V_{in} to ENABLE (10) to disable (shut down) the part.
 4. Use the table below to determine an R_{TRIM} resistor for the desired voltage.
 5. To get an intermediate voltage between 0.800 V and 2.500 V, use the equation at right.

$$R_{trim} = R_6 / ((V_{out} / V_{FB}) - 1) - R_4$$

WHERE $R_4 = 37.4k \text{ Ohms}$
 $R_6 = 80.6k \text{ Ohms}$
 $V_{FB} = 0.800 \text{ VDC}$

V_{OUT}	R_{TRIM} (k Ω)
2.5	0.523
1.9	21.0
1.8	27.0
1.5	54.9
1.2	124
