

PRODUCT CHANGE NOTIFICATION

MAGNETICS

REVISED February 21, 2025

Bourns® 9250A-685-RC and 9250A-335-RC Series Molded Axial Inductors

Change to Construction of Wires

Riverside, California – February 14, 2025 – In the spirit of continuous improvement, effective May 1, 2025, Bourns will change the construction of the wires of the [9250A-685-RC](#) and [9250A-335-RC](#) Series Molded Axial Inductors to enhance product robustness. The construction of the wire of the affected part numbers will change from two strands to three strands twisted together for the finished wire.

Affected Part Number

[9250A-685-RC](#)

[9250A-335-RC](#)

The product's fit, function, and form remain the same. **The quality and reliability should be improved.** The modified product continues to meet data sheet specifications.

Reliability testing and samples are available upon request. Bourns recommends that customers test the affected part numbers in their specific applications for verification of satisfactory performance.

Implementation dates are as follows:

Date that deliveries of existing products will cease: **April 30, 2025**

Date that deliveries of modified products will begin: **May 1, 2025**

First date code using the above changes: **2518**

Orders for the affected part numbers received after May 1, 2025 may be filled interchangeably between the Molded Axial Inductors using the existing two wire strand method or new three wire strand method until all products manufactured with the two wire strand method have been depleted.

If you have any questions or need additional information, please feel free to [contact Customer Service/Inside Sales](#).

Users should verify that the described changes will not impact the performance of the product in their specific applications.
