### Bourns® Model PEC11 Update

In line with our commitment to continuous improvement of our products and manufacturing processes, Bourns® Sensors and Controls Product Line is proud to announce an update to our [Model PEC11](#) 12 mm Contacting Rotary Encoder.

The update entails a change to the mold for the base of the product. In the photos below you will note the difference between the old and the new mold. This mold change is being implemented to provide better stability to the lead frame when the base is insert molded. This change is only visible externally on product without the switch option.

*Old rear base*

*New rear base*

This manufacturing change does not affect form, fit, or function of the product. There are no changes to prices, minimums or multiples for the upgraded product. The upgraded product will begin shipping with all current and new orders.
