## Sensors & Controls Product Marking Upgrade

In line with our commitment to product excellence, Sensors & Controls is introducing a product marking improvement to all catalog models currently marked for identification with ink. The product upgrade utilizes laser-marking technology in place of marking ink. This change will improve piece part processing and provide end customers with a more durable marking. The photos below show the difference in marking.

**Ink print marking method**

**Laser print marking method**

Please note that **this change does not affect form, fit or function of the product.** There will be no changes to current prices, minimum order quantities or multiples.

Please ensure that your customers are notified of this product upgrade.
