## **Clarification for Product Alert/Discontinuation Notice - Model 70AA Male Contact Only-**

In March 2002, the sales force was notified of the discontinuation of Model 70AA products only. Many understood this message to read that the entire line was discontinued. This is not the case. The only part no longer available in the product line is the Model 70AA Male Contact with locator pins.

The Model 70AA family (as well as the 70AD family) remains a viable product line for Bourns, and we will continue to support customers with the catalog items. Please note that the locator pin option has been removed from the 70AA Male datasheets available on Bourns.com.

Bourns' is not currently pursuing any custom designs with Modular Contacts, but we will still consider some modification of standard devices not requiring major tooling or production line changes are still being considered.

Please bring this letter to the attention of anyone in your organization involved with selling to OEM, Distribution or EMS accounts. The original notification letter is available on the Partnership section of Bourns.com.
